**SD10244XXX, PT RTD probe sensor**

The history of revision change for the specification

Date	Revision	Changes
2019/09/26	A0	New Approval

## SD10244XXX, PT RTD probe sensor

### Features / Applications :

- Features:
  - Low drift
  - Long service life
  - Wide temperature range
  - Wide range of resistance values
  - Temperature linear control
  - High precision
  - Fast response time
  - RoHS compliant
  
- Application:
  - Home Appliances: Oven

### Electrical Specifications :

Characteristics	Feature
Resistance value at 0°C	1000±4.0Ω
Temperature coefficient of resistance (TCR)	3750ppm/°C
Operation Temperature Range	-40°C~ +538°C
Maximum ambient on sensor	593°C
Maximum Applied current	2 mA

**Outline Drawing :**

**Outline Specifications :**

No.	Material	Specification
①	Probe tube	Φ5XL79 mm, material: 300 series stainless steel tube. Discoloration due to welding and high temperature testing is acceptable.
②	Flange	Material: 300 series stainless steel.
③	Fiberglass sleeving	This sleeve is #11 size with a minimum wall thickness of 0.012 and is rated up to 1200°F.

④	Lead wire	24 AWG nickel plated stranded copper with fiberglass insulation over each.
⑤	Connector	Terminal: TE 175151-2 Housing: TE 176271-1
⑥	Sensor element	1000 ohms thin film platinum RTD, $\alpha(\text{TCR}) = 3750 \text{ ppm}/^\circ\text{C}$ ESD sensitivity level: $\pm 2\text{KV}$

## Type Designation :

SD    102    4    4    XXX  
(1)    (2)    (3) (4)    (5)

Where:

- (1) Series No: SD= PT probe
- (2) Resistance Value: 102=500=500 ohm
- (3) TCR/Class: 4 = 3750/C
- (4) Package type : 4 = Metal tube type
- (5) Serial no

## Characteristics :

### Electrical

Item	Specification and Requirement	Test Method
Dielectric strength	Current leakage < 1mA No breakdown.	Apply 1250 VAC between the lead wires and stainless steel tube for 1 second at room temperature.
Insulation resistance	>50 Megohms	Apply 50 VDC between the leads wire and stainless steel tube for 1 second.
Short time overload	$\Delta R(0 \text{ degree}) \leq 0.24\%$ Without distinct damage in appearance.	Repeat 10 cycles as follow: Apply current: 5mA rated current for 5 seconds and 30 seconds at room temperature.
ESD	$\Delta R(0 \text{ degree}) \leq 0.24\%$	Human body, 2KV.

## Mechanical

Item	Specification and Requirement	Test Method
Flange pull force	>8 Kgf	Apply axial pull force on the flange assembled in probe housing.
Wire pull out force	>5.4 Kgf	Apply axial pull out force on the leads wire in probe housing.
Crimping pull out force	>3.0 kgf	Fix the crimped terminal to the jig, apply axial pull out force on the wire at the speed rate of 100 mm/minute

## Endurance

Item	Specification and Requirement	Test Method
Low temperature test	$\Delta R(0 \text{ degree}) \leq 0.24\%$ Without distinct damage in appearance.	(1) Keep the probe sensor in $-55^{\circ}\text{C}$ for 1000 hours.
High temperature test	$\Delta R(0 \text{ degree}) \leq 0.24\%$ Without distinct damage in appearance.	Keep the probe sensor in $538^{\circ}\text{C}$ for 1000 hours.
Humidity test	$\Delta R(0 \text{ degree}) \leq 0.24\%$ Without distinct damage in appearance.	Keep the probe sensor in $60^{\circ}\text{C}$ and 90%~95% R.H. for 1000 hours.
Thermal cycles	$\Delta R(0 \text{ degree}) \leq 0.24\%$ Without distinct damage in appearance.	(1) Keep the probe sensor in $538^{\circ}\text{C}$ for 3 hours. (2) keep the probe sensor in $70^{\circ}\text{C}$ for 30 minutes. Repeat (1)~(2) for 150 cycles.
Thermal shock	$\Delta R(0 \text{ degree}) \leq 0.24\%$ Without distinct damage in appearance.	(1) Keep the probe sensor in $538^{\circ}\text{C}$ for 10 minutes. (2) Keep the probe sensor in room temperature for 5 minutes. Repeat (1)~(2) for 250 times.

Temperature and resistance relationship:

- The temperature and resistance relationships used in this standard are as follows:

When  $T < 0^{\circ}\text{C}$  :

$$R_t = R_0 [ 1 + aT + bT^2 + cT^3 ( T - 100 ) ]$$

When  $T \geq 0^{\circ}\text{C}$  :

$$R_t = R_0 (1 + aT + bT^2)$$

Where

$R_t$ : resistance at a certain temperature  $T$

$R_0$ : resistance at  $0^{\circ}\text{C}$

$a, b, c$  : coefficient (refer to the following table)

Coefficient for  $\text{TCR}=3750 \text{ PPM}/^{\circ}\text{C}$

Temperature	a	b	c
$T < 0^{\circ}\text{C}$	3.81019E-03	-6.01875E-07	-6.14500E-12
$T \geq 0^{\circ}\text{C}$	3.81019E-03	-6.01875E-07	0
