Care Note :

Care note for storage

- (1) Shunt sensor shall be stored in a environment where temperature and humidity must be controlled (temperature 5 to 35° C, humidity < 60% RH). However, the humidity should be maintained as low as possible.
- (2) Shunt sensor shall not be stored under direct sunlight.
- (3) Shunt sensor shall be stored in condition without moisture, dust, any material defect solderability, or hazardous gas (i.e. hydrogen chloride, sulfurous acid gas, and hydrogen sulfide)
- (4) The sensor can be stored for at least one year under the condition mentioned above.

Care note for operating and handling

- (1) Protect the edge and coating of the sensors from mechanical stress.
- (2) Avoid bending of printing circuit board (PCB) when cutting and fixing it on support body to reduce mechanical stress on sensors.
- (3) Sensor should be used within the condition of specification.

Note: When a voltage higher than specified value is loaded to the sensor, this may damage the sensor material due to temperature rise.

- (4) The loaded voltage should consult terminal temperature of the sensor according to the derating curve.
- (5) When applying a high current exceeding suggested specification (pulse current, shock current) to the sensor, it is necessary to re-evaluate the operating condition before using it in the system.
